PROFESSIONAL SUMMARY

AI & Data Science student with production ML experience at Walmart Global Tech, building PySpark ETL pipelines processing **4M+** records and ML models improving delivery timeliness by **3%**. Skilled in Python, SQL, PyTorch, TensorFlow and production-grade ML systems.

EDUCATION

Bachelor of Technology – Artificial Intelligence & Machine Learning

Malla Reddy Engineering College for Women, Hyderabad

May 2026

CGPA: **9.7 / 10.0**

Relevant Coursework: Machine Learning, Deep Learning, NLP, DSA, DBMS, Computer Vision

EXPERIENCE

Walmart Global Tech

Software Engineer Intern (Data Science)

May 2025 – July 2025

Bangalore, India

- Designed and optimized ensemble-based ML models for supply chain forecasting, improving delivery timeliness by **3%** through segment-wise threshold optimization across **5 performance tiers**.
- Engineered scalable PySpark ETL pipelines on Azure Databricks, processing **4M+ logistics records** for automated ingestion, training, validation, and production deployment.
- Conducted **100+ configuration experiments** reducing incorrect predictions and boosting high-confidence production coverage.
- Owned end-to-end weekly retraining pipeline across **5 performance segments**, ensuring zero data leakage.

Infosys Springboard | [GitHub](#)

Artificial Intelligence Intern

Oct 2024 – Dec 2024

Hyderabad, India

- Engineered **LingualSense**, a multilingual NLP language detection system supporting **28 languages** using **LSTM, GRU, and NN** deep learning architectures in **Tensorflow/Keras**.
- Conducted EDA, **20K-vocab tokenization**, and **150-token padding** achieving up to **97%** test accuracy.
- Fine-tuned models via **stratified 80/20 splits** and dropout regularization, improving accuracy by **2%**.
- Implemented real time language detection via Streamlit app and managed code versioning using Git across **3 model architectures** ensuring structured team collaboration.

KEY PROJECTS

GeoVision: AI Super-Resolution for Satellite Imagery | [GitHub](#)

Python, PyTorch, Streamlit

Dec 2025 – Mar 2026

- Trained **4 SR models** (SRCNN, EDSR, SRGAN, RCAN) on **1200+ DOTA satellite images**.
- Achieved peak **39.60 dB PSNR** and **0.994 SSIM**, outperforming baseline SRCNN by **16%**.
- Built an interactive Streamlit application for real-time super-resolution inference across all **4 models**.

Synthetic ECG Signal Generation (GANs) | [GitHub](#)

Python, TensorFlow, Streamlit

Feb 2025 – Apr 2025

- Built a GAN-based deep learning model generating **6000+ synthetic ECG signals**.
- Validated signal quality using Dynamic Time Warping with **85% lower baseline distance**.
- Developed a Streamlit web interface enabling real-time waveform generation for up to **100 signals per session**.

TECHNICAL SKILLS

Programming: Python, Java, SQL, C

Data Engineering: PySpark, Azure Databricks, ETL Pipelines

Machine Learning & AI: TensorFlow, Keras, PyTorch, Scikit-learn, Deep Learning, NLP, GANs, LSTMs, CNNs

Data Analysis: Pandas, NumPy, Matplotlib, Seaborn

Tools: Git, GitHub, Google Colab, Jupyter Notebooks, Streamlit, VS Code

Cloud & Databases: Microsoft Azure, MySQL

ACHIEVEMENTS

IBM GenAI Hackathon (Feb 2025): Built an LLM-based onboarding assistant reducing HR effort by **80%**; ranked in top **30%**.

CERTIFICATIONS

Microsoft Career Essentials in Generative AI — Microsoft

Google Gen AI Exchange Program — Google
